

Pressure outlet from cross over pipe provides boost pressure to trigger aneroid at rear of injection pump

Aneroid provides more fuel under boost

Temperature switch on side of block. Triggers idle up actuator on cold start up

Idle up actuator

Boost lights on dash. Green lights triggers at 2psi, orange light triggers at 15psi

Shut down vacuum switch

Shut down actuator

Vacuum pump on alternator

Power steering idle up. Not on all models.

Drawing taken from FSM
